

PRODUCT SUMMARY

K2 - KeyAuditor & KeyServer is an integrated software asset management suite for automated IT asset auditing and software license management. K2 will show what's installed on your network and report details about its usage. It can also control access to licensed software and run detailed deployment and usage reports for your entire organization or for specific departments.

Enterprise-wide Audits

K2 integrates enterprise-wide software and essential hardware auditing with the award winning KeyServer's full featured license management services.

Reporting Functionality

An extensive collection of built-in and customizable reports provides an integrated view of software and hardware asset allocation, software usage patterns, and license compliance for all Windows, Macintosh, and Thin Client computers.

Management reports can be scheduled for periodic execution using the built-in, dedicated report server. Reports are then readable in any web browser with either public or authenticated access.

License Management

K2 manages all common software licenses, including unlimited site licenses, node-locked "per-CPU" licenses, concurrent-use, and custom licenses. You specify licensing policies and then track deployment and usage for each program or application suite.

Sassafras Software, Inc.

K2 - KeyAuditor & KeyServer is employed at thousands of organizations world-wide to successfully manage their IT requirements.

Integrated Software Auditing & Software License Management

Early Pioneer in Software Asset Management.

Based in Hanover, New Hampshire, Sassafras Software was an early pioneer in the development of software license compliance technology for desktop computers beginning in 1989. The company has been providing IT asset management solutions since their first public release of KeyServer in 1990. Sassafras enjoys broad support from software publishers, including many technical partners that rely exclusively on KeyServer technology. For nearly 25 years, Sassafras products have supported Software Asset Management (SAM) and IT Asset Management (ITAM) activities on some of the largest computer networks worldwide.

Standards Development & Industry Leadership.

As a SAM/ITAM industry technology leader, Sassafras' team includes the Convener of the ISO international standards group developing the 19770-3 Software Entitlements Standard, and coauthor of both ISO 19770-3 and 19770-2 Software Identification (SWID) standards. Sassafras is an active participant in numerous industry forums that promote dialog between SAM practitioners, compliance officers, software publishers, and licensing service providers. Company leaders have presented software asset management topics for discussion at many industry forums including Gartner Group, IAITAM ACE, Microsoft WPC, Adobe QBR, Adobe Staff Training, TagVault Software ID Summit, US National School Board's Assn. (NSBA), Japan Personal-Computer Software Assn. (JPSA), Japanese Ministry of International Trade and Industry (MITI), University of London, the Academic Applications Forum - UK, US Department of Defense (DOD) Software Product Manager's Team, Macworld IT Conference, SIIA, IBSMA and numerous other forums.
